SUMMARY

I am a full-stack software engineer with expertise in JavaScript, React.js, Rails, Spring Boot, and AWS. Passionate about building scalable applications and writing clean, maintainable code. Skilled in API development, database optimization, and cloud infrastructure, and thrive in collaborative, remote environments.

EXPERIENCE

Full-Stack Developer

Remote

[Novel Aquatech](#)

03/2025 - Present

Remote, Freelance

- Enhanced and maintained a client portal for device management, reporting, and settings, delivering new features and critical bug fixes that improved system reliability and reduced support tickets by 20%
- Built a full-featured admin portal from scratch, streamlining user, device, and configuration management, which cut administrative overhead by 25%

Full-Stack Developer

Remote

[Kwanzoo](#)

10/2022 - 02/2025

Remote

- Led development of the site-stop feature, driving the acquisition of 10+ enterprise clients and creating a new revenue stream
- Redesigned and modernized the Kwanzoo dashboard by migrating legacy codebase to a modern React architecture, resulting in a 30% improvement in load time and smoother user interactions
- Integrated Elasticsearch snapshots to enhance API performance, resulting in significantly faster query response times and improved system reliability

Technical Support Engineer

Remote

[MICROVERSE](#)

01/2022 - 03/2024

Remote, Part-Time

- Reviewed 500+ front-end projects for code quality, best practices, and adherence to JavaScript, React, Rails standards
- Mentored developers and resolved complex technical challenges, optimizing performance and efficiency, leading to a 20% faster development cycle, improved code maintainability, and better speed and accessibility compliance

EDUCATION

Remote Full-Stack Web Development Program

Remote

[MICROVERSE](#)

11/2021 - 07/2022

- Completed 1,300+ hours of hands-on coding, mastering React, Redux, JavaScript, and Ruby on Rails.
- Built and deployed real-world projects in a remote, collaborative environment, following GitHub workflows.

Bachelor of Technology in Computer Science

India

Kalinga University

07/2019 - 06/2022

Diploma in Computer Science

India

Teerthanker Mahaveer University

07/2016 - 06/2019

SKILLS

Front-End Technologies: JavaScript, TypeScript, Java, Ruby, Spring, Rails, SQL, React.js, Redux, HTML5, CSS3

Tools & Performance Optimization: Webpack, Vite, Elastic Search, GitHub, Postman, Component-Based Architecture

Deployment & Collaboration: Netlify, Vercel, AWS, Remote Work, Code Reviews, Mentoring

PROJECTS

Book Appointments

<https://book-appointments-frontend.netlify.app/>

<https://github.com/thecodechaser/book-appointment-frontend>

- Developed a full-stack doctor appointment platform enabling secure bookings with user authentication and role-based access control
- Designed and implemented a responsive, SPA-style front-end using React and Redux for an intuitive user experience
- **Tech Stack:** Rails, React, JavaScript, Redux, SQL, Tailwind

Smart Form Builder

<https://form-builder-codechaser.netlify.app/>

<https://github.com/thecodechaser/smart-form-builder>

- Designed and developed a dynamic smart form builder with drag-and-drop support, custom question types, and real-time input handling
- Implemented nested conditional logic to enable options that trigger dynamic follow-up questions, supporting complex survey flows and decision-tree structures
- **Tech Stack:** React, JavaScript, Redux, Material UI, Tailwind, Netlify

Task Master

<https://task-master-codechaser.netlify.app/>

<https://github.com/thecodechaser/task-master>

- Built a React-based task management application providing robust full CRUD functionality for creating, updating, and organizing tasks efficiently
- Improved user experience by creating an intuitive kanban board with drag-and-drop functionality, which enables seamless task tracking and real-time progress visualization
- **Tech Stack:** React, JavaScript, TypeScript, Redux, Tailwind, Netlify
